B. State law requires submitting to the Virginia State Water Control Board information about groundwater and wells for every well made in the State intended for water, or any other non-potable use. This information must be submitted whether the well is completed, on standby, or abandoned. Information required includes an accurately and consistently prepared water well completion report, full data from any aquifer pumping tests, drill cuttings taken at ten foot intervals (unless exception is secured), the results of any chemical analysis, and copies of any geophysical logs. Quarterly pumpage and use reports are required from owners of public utility and industrial wells. County or State permits to drill may be required in some parts of the state. Some counties require submission of a water well completion report. The Virginia State Health Department requires a water well completion report for public supply wells.
